## Summary

Senior Full-Stack Engineer with 5+ years of experience specializing in backend-centric systems with sophisticated domain logic.

Experience in designing and implementing backend and frontend components of production applications, including ERP systems, automated 3D model-based spec generation, and cost estimation systems.

Expert in system design, legacy system modernization, and infrastructure design (Docker, CI/CD, Gitlab, Github Actions).

## Skills

### Backend

- PHP, Laravel, Yii2
- Node.js, Nest.js (~1 yr)
- Rest API, 3rd-party integrations, service architecture, complex business logic implementation

### Frontend

- Vue.js (inertia, nuxt), jQuery, vanilla javascript, Alpine.js,
- Shadcn, element plus, reka ui
- Vite, Webpack
- Tailwind, bootstrap

### Infrastructure & DevOps

- Docker, docker-compose
- CI / CD (Gitlab, Github)
- Servers setup (Hetzner, Contabo, Netcup)
- Nginx, Caddy

### Other

- Reverse engineering
- End-to-end feature ownership
- Technical decision making
- Relational database design
- Writing technical documentation
- Complex debugging (app logs, Sentry)
- Know how to google professionally

## Open Source Contribution

- Telebot PHP (v3 → v4 development, crucial bug fixes, auto tests)
- Reka UI (minor bug fix)
- Gotenberg (debugging, issue creation, logging)

## Interests

- Play classical and electric guitar (music school graduated)
- Cats (hopefully you like them)

## Experience

### Leber group | Senior Full-Stack Developer

04.2025 - 02.2026

- Led performance optimization initiatives (Lighthouse, PageSpeed, Vite bundle analysis), improving performance metrics by 30–50%
- Designed a performance-aware Sentry integration with deferred loading to avoid impacting initial page load and Core Web Vitals.
- Architected a Node.js integration service powering a Telegram administration panel (groups, members, workflows), isolating MTProto complexity and improving system maintainability.
- Built CI/CD pipelines and containerized infrastructure (Docker) with automated blue-green deployments, improving release safety and deployment speed.

### Leber group | Middle Full-Stack Developer

02.2024 - 04.2025

- Developed and supported the company's internal services using Laravel and Vue, implementing new features and improving existing modules.
- Migrated legacy structures to a modern framework.
- Contributed to system design discussions, helping define requirements, technical approaches, and implementation strategies.
- Wrote technical documentation and user guides, improving knowledge sharing and adoption for both the development team and users.
- Automated development workflows and routine tasks by developing tools that reduced the time required for employees to complete tasks.
- Provided support in the production environment, debugging complex issues and assisting users (sentry, logs, support tickets).
- Conducted code reviews and collaborated with colleagues to improve code quality and development practices.

### Upwork | Full-Stack Developer

01.2022 - 03.2024

- Developing control panels as third-party services for managing the main application's data.
- Fixing modules/plugins/libraries.
- Server setup.
- Working with CSS animations.
- Optimizing page load speed.

### Self-Employed | Full-Stack Developer

03.2021 - 03.2024

- Led full-cycle development of multiple web projects, managing requirements gathering, solution design (wireframes/prototypes in Figma), implementation, deployment, and maintenance.
- PHP for backend (LAMP stack). Later migrated to the Yii2 framework.
- Developed responsive frontend interfaces using HTML/CSS, jQuery, and Bootstrap 4, ensuring cross-device compatibility and a user-friendly experience.
