Experience

03.2021 - 01.2022

Self Employed
Full Stack Developer
Tbilisi, Georgia

🔗 https://johnber.online/#myProjects

Turnkey website creation and maintenance.

Full development process.

- Requirements discussion
- Design in Figma
- Server setup and deployment
- Full frontend and backend development

The core stack is vanilla PHP + JQ + BS 4.

(Later, some functionality was migrated to Vue + Yii2)

01.2022 - 03.2024

Freelance
Full Stack Developer
Tbilisi, Georgia

🔗 https://upwork.com/freelancers/johnber

Successfully delivered **20+** projects with a **100%** Job Success Score and **5.0** average rating.

Various one-time and mid-term projects. Mainly admin panel fixes, front-end development/improvement of modules and plugins.

A few jobs related to server setup and deployment.

02.2024 - 04.2025

Leber Group
Middle Full-Stack PHP Developer
Tbilisi, Georgia

🔗 https://leber.group/en

Led migration of legacy services to a modern Laravel-based architecture

Designed, developed, and maintained an ERP system

Implemented core ERP modules covering:

- Warehouses, Demands, and Supplies (extending and maintaining)
- Automatic warehouse slot allocation and booking (**end-to-end**)

Built integrations with Onshape (**end-to-end**):

- Automated product specification generation from 3D models and projects

Auto-generated internal documentation and assembly schemes (extending and maintaining)

Developed internal systems for management and operations (**end-to-end**):

- Project accounting and tracking on maps
- Aggregated project summaries and reporting
- Role-based permissions and approval workflows

User support and debugging. Processing support tickets and presenting progress during weekly demos. Writing wikis and user documentation.

04.2025 - Present

Leber Group
Lead Full-Stack Developer
Serbia

🔗 https://leber.group/en

Migrating Laravel + Blade ERP to Vue (partial)

- Migrating various modules and systems.

Creating a system for managing corporate chats and folders in Telegram via ERP (end-to-end)

- Telegram MTProto usage
- Node.js service layer for handling requests from a Laravel app

Led the design and development of an adapter-based solution to support multiple map modules within a shared custom functionality.

Designed and implemented an interface to manage custom product attributes, regional control, and dictionaries (system architecture and partial vue frontend)

Mentored junior devs to deepen understanding of code and development practices, improving code quality and collaboration.
